Bounded Sequences

Reading

Section 11.1 from 548

Problems

• Practice Problems: 11.1 61, 65, 67, 73, 74, 83

• Problems to turn in: 11.1 70

• Challenge (optional): 11.1 85, 86, 87

Topics to know

- 1. Passing a sequence through a function
 - Example for $n^{1/n}$
- 2. Definition of bounded sequence
- 3. Convergent sequences are bounded (theorem 5)
- 4. Bounded monotonic sequences converge (theorem 6)
- 5. How to use theorem 6 for recursively defined functions:
 - \bullet First guess what the limit would be if it existed
 - Show that this limit acts as a bound (proof by induction)
 - Show sequence is increasing/decreasing (proof by induction)
